An introduction to earthworms Summer 2016 Importance Earthworms can be used as an indicator of soil quality because worms are uncommon in soils that are compacted, waterlogged, have extremes in soil pH or are very sandy. Many arable management practices have an impact on the number of earthworms present in soil, particularly

Soil is a non-renewable dynamic natural resource that is essential to life. Water movement, water quality, land use, and vegetation productivity all have relationships with soil. This article introduces many important soil concepts including development, classification, properties (physical, chemical, and biological), quality, and conservation. A general understanding of soil concepts and these interwoven relationships is essential to making sound land management decisions.
