A Basic Thermistor Circuit. Let's build a basic thermistor circuit to see how it works, so you can apply it to other projects later. Since the thermistor is a variable resistor, we need to measure the resistance before we can calculate the temperature.

This looks like it'll be quite useful - though a write function that doesn't take a registerAddress might be nice. Some homebrew I2C devices don't seem to use a register address for writes (which confuses me), and other I2C devices (like the 24LC256 EEPROM) use multi-byte addresses.
